InformationLeader at Mater

InformationLeader has been successfully installed at Mater Health Services in Brisbane, Australia.

Mater Health Services cares for more than 500,000 patients each year. The finance department processes hundreds of invoices each month, resulting in hundreds of printouts and countless hours of manual data processing. With InformationLeader, this paper based process was converted to an electronic system that meant that reporting was automatic and eliminated the risk of lost invoices.

"My time is important; InformationLeader has allowed me to focus on actually doing my job rather than filling out and following up paperwork."

- Kym Frost, Labour Business Analyst at Mater Health Services Brisbane.
